

# Aircore EC

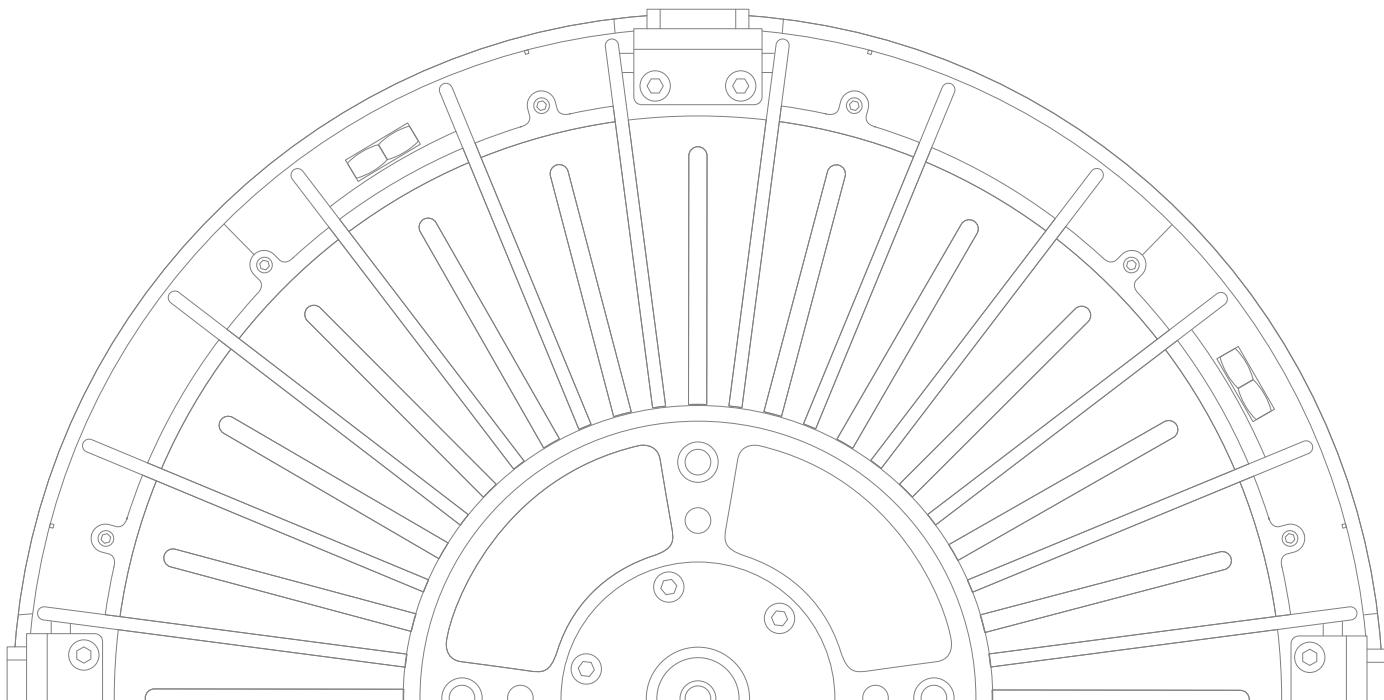

## BACnet User Manual

BACNet Version 1.4  
Release: Gen4  
Date: October, 2025

## Table of Contents

<b>1. About the Manual</b>	<b>3</b>
<b>2. Introduction to BACnet Communication</b>	<b>3</b>
<b>3. BACnet: Installation and Field Wiring Hardware</b>	<b>4</b>
<b>4. BACnet Module: Installation</b>	<b>4</b>
<b>5. BACnet Module, Field Wiring</b>	<b>5</b>
<b>6. Terminating Resistor</b>	<b>6</b>
<b>7. BACnet Module, Programming</b>	<b>6</b>
<b>8. NPU Tool</b>	<b>6</b>
<b>9. BACnet Baud Rate and Address</b>	<b>7</b>
<b>10. Appendix &amp; Troubleshooting</b>	<b>10</b>

## 1. About the Manual

This manual describes the information needed to operate Infinitum Aircore EC motors using the BACnet protocol. This manual should be used in conjunction with the [Aircore EC Installation Operation and Maintenance \(IOM\) Manual](#).

### Abbreviations

**BACnet** Building Automation Control Network

**BACnet MS/TP** BACnet Master-Slave Token Passing

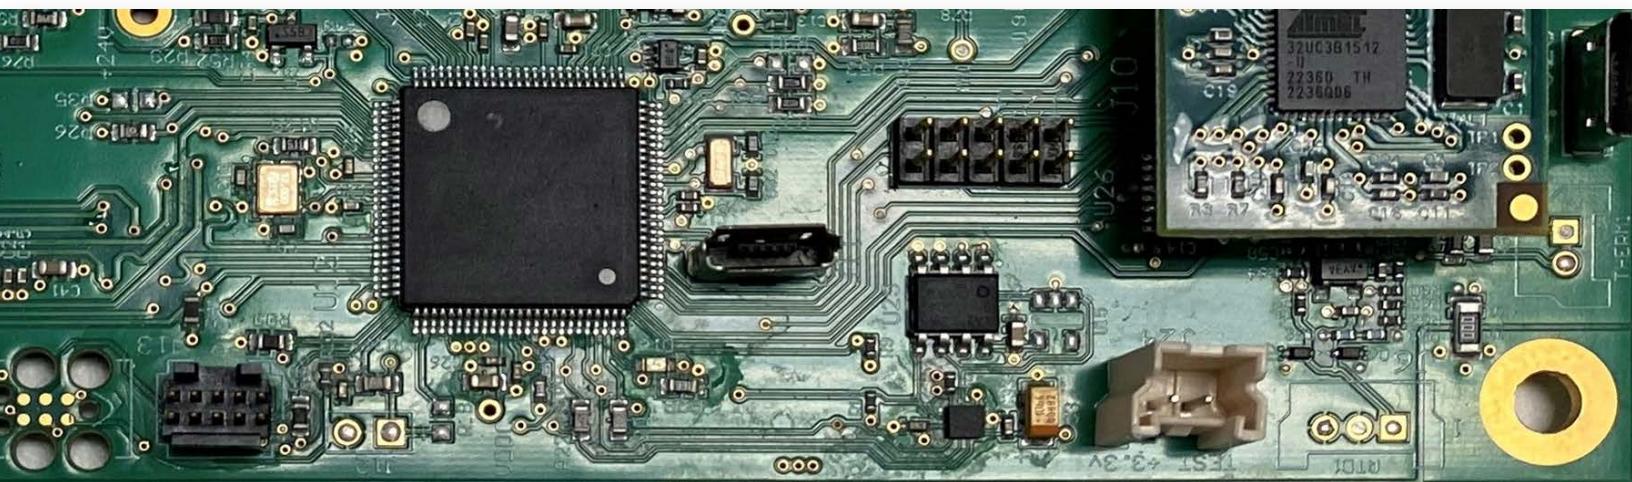

## 2. Introduction to BACnet Communication

BACnet is a common motor control protocol used in HVAC applications. This protocol is defined by ANSI/ASHRAE/ISO Standard 135-2004. The protocol is used for building automation and control describing the interaction between devices and systems. The protocol uses an object-oriented model for data and commands.

BACnet has 6 types of communication networks to transmit messages with each defining the physical and data link communication layers. The six network types are:

- BACnet ARCnet
- BACnet Ethernet
- BACnet Lontalk
- BACnet MS/TP
- BACnet Point-to-Point
- BACnet IP

Infinitum Aircore EC motors support BACnet MS/TP. BACnet MS/TP utilizes RS485 as the physical layer. RS485 is a serial interface that follows the EIA/TIA-485 standards. Infinitum BACnet operation allows communication baud rates from 9600 to 115200 bits/sec. The interface is a differential signal, electrically isolated. It allows up to 32 devices on a segment, with a maximum cable length of 1000m. This EIA-485 network requires a terminating resistor at each end of the main bus. Infinitum Aircore EC motors include the terminating resistor.

### 3. BACnet: Installation and Field Wiring Hardware

#### BACnet ordering and identification

Infinitum Aircore EC motors have a catalog number that identifies hardware features of the Aircore EC family. Motors are ordered with their features defined by their catalog number. This number is found on the identification label of the motor. The catalog number decoder is below in Figure 1.

Figure 1. BACnet MS/TP is one of the VFD and I/O options ("B").

#### AE (Aircore EC) Family Catalog Number **XX-XX-XXXX-XXXX-XXXX**

Family	Frame	Rated Power	Rated Speed	Product Code Voltage	Product Code VFD and I/O	Product Code Reserved	Product Code Bearings	Product Code Shaft Length	Product Code Wireless	Product Code Enclosure	Product Code Grounding
XX	XX	XXXX	XXXX	X	X	X	X	X	X	X	X
AE	13 130 Frame	0590*+	1225+	A 460V/60Hz	A MODBUS RTU	A None	S Steel	A 3.25"	A None	4 IP54	0 Grounded Wye
	15 150 Frame	0789*+	1800+	B 415V/60Hz	B BACnet MS/TP		H Hybrid Ceramic		B Bluetooth	5 IP55	3 Delta/HRG
	18 180 Frame	1000*+	2400+	C* 575V/60Hz					C Cellular		
	20 205 Frame	1500*+	3600+						W Wi-Fi		

\*0590= 5.9 HP, 0789= 7.89 HP, 1000= 10 HP, 1500= 15 HP

+ More power and speed variations available

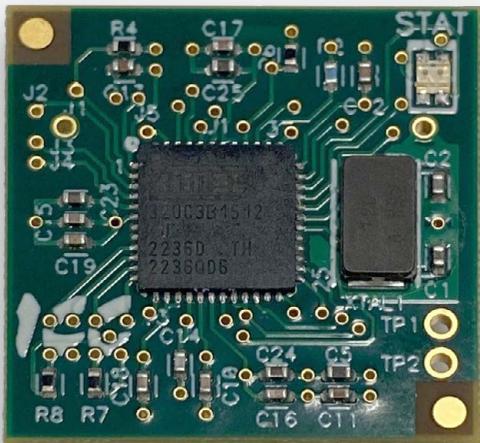

### 4. BACnet Module: Installation

BACnet is a factory configured option, though Infinitum service technicians can upgrade a field installed motor to support it. BACnet functionality is provided by a BACnet module that is installed on the Aircore EC CIM (Communication Interface Module) board.

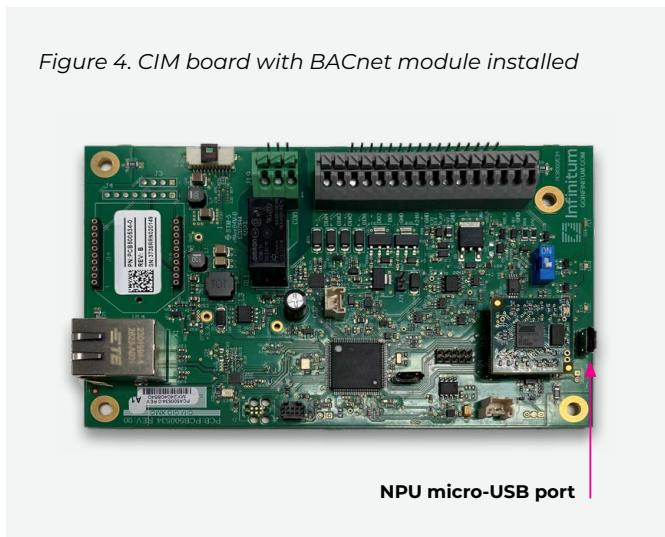

The BACnet module is BTL certified. [PICS is in appendix](#).

See Figure 3.

Figure 3. BACnet module

The BACnet module is installed in the CIM below. For reference, the STAT on the screen print on the corner of the BACnet module faces the terminal strip. See Figure 4.

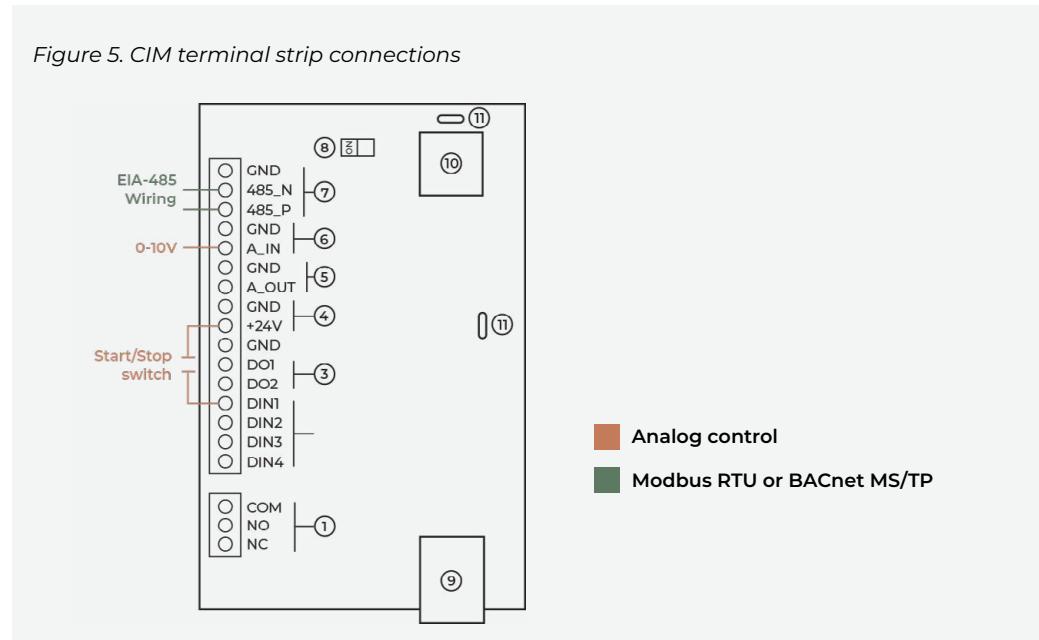

*Note: If the BACnet module is installed in the incorrect orientation this could cause permanent damage to the module*

## 5. BACnet Module, Field Wiring

Like Modbus, BACnet uses EIA-485 signaling. All control signals are available on the terminal strip of the CIM board. See Figure 5 (Pin label 7) for the EIA-485 connections on the CIM board terminal strip. The following details should be followed for EIA networks:

- Shielded cables should be used with at least one ground wire and twisted signal wires
- Cable runs should be laid separately from power cables if possible
- The network should be grounded, preferably at the same ground connection. Cable shields should be connected at each motor (but not to ground)
- Termination resistance should be provided at each end of the cable run

## 6. Terminating Resistor

RS485 based networks require termination at both ends of the main bus. Infinitum motors provide this termination using a DIP switch that connects a 120 Ohm resistor to the serial line. This DIP switch placement is indicated in the drawing in Figure 5 (Identifier 8).

## 7. BACnet Module, Programming

BACnet networks require each device to have a unique address so they can be individually addressed by the BACnet master. Another BACnet parameter that must be established is the Baud rate. Infinitum provides an Installer link to the BACnet Network Parameter Utility (NPU) Tool, which can be used to change the address (Instance) and baud rate of each motor on the BACnet network. The tool is available on the [Infinitum website](#) and as a link on I-con, the Infinitum motor control tool. See Figure 6.

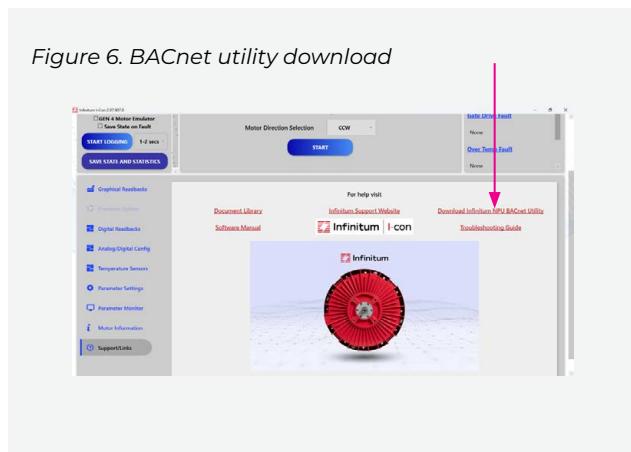

Figure 6. BACnet utility download

Users will need internet access to utilize this link. The link is a Zip file. You should extract all the files then run the NPU.exe file to start the NPU utility.

## 8. NPU Tool

BACnet networks require each device to have a unique address so The Infinitum Network Parameter Utility tool can be downloaded via the links above. Once downloaded, the tool uses a USB connection from a laptop to the CIM board to communicate to the installed BACnet module. See Figure 5. *CIM terminal strip connections* for the location of the Micro-USB port to use with NPU.

Once NPU is downloaded, connect a USB to Micro-USB cable to the port indicated above. Power on the motor and start the NPU program. The screen below should appear, Figure 7.

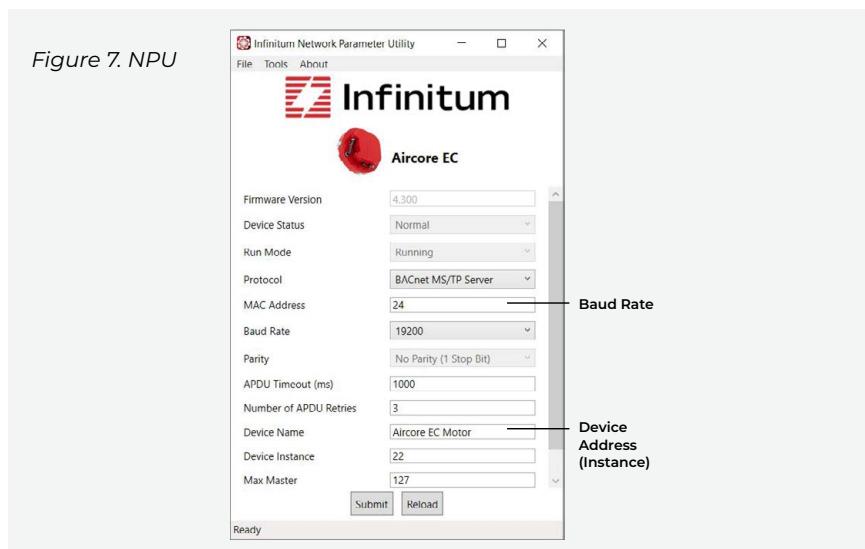

Figure 7. NPU

## 9. BACnet baud rate and address

The baud rate and address (Device Instance) are both editable fields and can be changed with the NPU tool as noted in Figure 7.

Do not alter the MAC address.

Register	Name	BACNet Object Number	BACnet object name (32 characters max)	Qty	BACnet point name (16 characters max)

### Aircore EC Com Module - BACnet PICS

#### BACnet Protocol Implementation Conformance Statement (PICS)

Date June 26, 2024  
Vendor Name: Infinitum, Inc.  
Product Name: Aircore EC Com Module  
Product Model Number: BACnet  
Application Software Version: V4.300  
Firmware Revision: V4.300  
BACnet Protocol Revision: 12  
Product Description:

The AirPort is a miniature serial communications engine-on-module for BACnet MS/TP applications. This product supports native BACnet, connecting directly to the MS/TP LAN using 19200 baud rate. The device can be configured as a BACnet Server.

#### BACnet Standard Device Profile (Annex L):

- BACnet Operator Workstation (B-OWS)
- BACnet Building Controller (B-BC)
- BACnet Advanced Application Controller (B-AAC)
- BACnet Application Specific Controller (B-ASC)
- BACnet Smart Sensor (B-SS)
- BACnet Smart Actuator (B-SA)

#### BACnet Interoperability Building Blocks Supported (Annex K):

- Data Sharing – ReadProperty-A (DS-RP-A)
- Data Sharing – ReadProperty-B (DS-RP-B)
- Data Sharing – ReadPropertyMultiple-B (DS-RPM-B)
- Data Sharing – WriteProperty-A (DS-WP-A)
- Data Sharing – WriteProperty-B (DS-WP-B)
- Data Sharing – WritePropertyMultiple-B (DS-WPM-B)
- Data Sharing – COV-B (DS-COV-B)
- Device Management – Dynamic Device Binding-A (DM-DDB-A)
- Device Management – Dynamic Device Binding-B (DM-DDB-B)
- Device Management – Dynamic Object Binding-B (DM-DOB-B)
- Device Management – DeviceCommunicationControl-B (DM-DCC-B)
- Device Management – ReinitializeDevice-B (DM-RD-B)
- Device Management – TimeSynchronization-B (DM-TS-B)\*
- Device Management – UTCTimeSynchronization-B (DM-UTC-B)\*

\* Available only when Real-time Clock Settings are enabled

#### Segmentation Capability:

- Able to transmit segmented messages Window Size \_\_\_\_\_
- Able to receive segmented messages Window Size \_\_\_\_\_

**Standard Object Types Supported:**

Property	Object Type									
	Device	Binary Input	Binary Output	Binary Value	Analog Input	Analog Output	Analog Value	Multi-state Input	Multi-state Output	Multi-state Value
Object Identifier	W	R	R	R	R	R	R	R	R	R
Object Name	W	R	R	R	R	R	R	R	R	R
Object Type	R	R	R	R	R	R	R	R	R	R
System Status	R									
Vendor Name	R									
Vendor Identifier	R									
Model Name	R									
Firmware Revision	R									
Application Software Version	R									
Protocol Version	R									
Protocol Revision	R									
Protocol Services Supported	R									
Protocol Object Types Supported	R									
Object List	R									
Max APDU Length Accepted	R									
Segmentation Supported	R									
Local Time*	W									
Local Date*	W									
UTC Offset*	W (-840... 720)									
Daylight Savings Status*	W									
APDU Timeout	W (10... 65535)									
Number Of APDU Retries	W (0... 10)									
Max Master	W (1... 127)									
Max Info Frames	W (1... 100)									
Device Address Binding	R									
Database Revision	R									
Active COV Subscriptions	R									
Present Value	R	W	W	R	W	W	R	W	W	W
Status Flags	R	R	R	R	R	R	R	R	R	R
Event State	R	R	R	R	R	R	R	R	R	R
Reliability	R	R	R	R	R	R	R	R	R	R
Out Of Service	R	R	R	R	R	R	R	R	R	R
Number Of States							R	R	R	R

<b>Units</b>					R	R	R			
<b>Priority Array</b>			R	R		R	R		R	R

<b>COV Increment</b>					W	W	W			
<b>Polarity</b>		W	W							
<b>Inactive Text</b>		R	R	R						
<b>Active Text</b>		R	R	R						

R – Readable using BACnet services

W – Readable and writable using BACnet services

\* Available only when Real-time Clock Settings are enabled

#### Data Link Layer Options:

- BACnet IP, (Annex J)
- BACnet IP, (Annex J), Foreign Device
- ISO 8802-3, Ethernet (Clause 7)
- ANSI/ATA 878.1, 2.5 Mb. ARCNET (Clause 8)
- ANSI/ATA 878.1, RS-485 ARCNET (Clause 8), baud rate(s) \_\_\_\_\_
- MS/TP master (Clause 9), baud rate(s): 19200
- MS/TP slave (Clause 9), baud rate(s): \_\_\_\_\_
- Point-To-Point, EIA 232 (Clause 10), baud rate(s): \_\_\_\_\_
- Point-To-Point, modem, (Clause 10), baud rate(s): \_\_\_\_\_
- LonTalk, (Clause 11), medium: \_\_\_\_\_
- Other: \_\_\_\_\_

#### Device Address Binding:

Is static device binding supported? (This is currently for two-way communication with MS/TP slaves and certain other devices.)     Yes     No

#### Networking Options:

- Router, Clause 6 - List all routing configurations
  - Annex H, BACnet Tunneling Router over IP
  - BACnet/IP Broadcast Management Device (BBMD)
- Does the BBMD support registrations by Foreign Devices?     Yes     No

#### Network Security Options:

- Non-secure Device - is capable of operating without BACnet Network Security
- Secure Device - is capable of using BACnet Network Security (NS-SD BIBB)
  - Multiple Application-Specific Keys:
  - Supports encryption (NS-ED BIBB)
  - Key Server (NS-KS BIBB)

**Character Sets Supported:**

Indicating support for multiple character sets does not imply that they can all be supported simultaneously.

- |   |   |                                     |
|---|---|-------------------------------------|
